Products

ATLANTIS CONTRACTS (CUSTOMERS / SUPPLIERS)

The new module **Atlantis Contracts** enables the user to monitor the Support or Maintenance Contracts of customers and suppliers.

The key features of this module allow the user to:

- Manage the contract's general data such as:
 - The start and end date of contract
 - The category and type of contract
 - The duration of support
 - support tickets
- Define the value of the contract and calculate the invoicing dates according to the number of instalments defined by the system.
- Record the items as well as the services covered by the specific contract.
- Correlate customer contract with supplier contract.
- Record detail remarks related to the contract.
- Record and monitor actions related to the specific contract through the CRM module.

The screenshot shows a software window titled 'Customer contracts'. It has a menu bar with 'Data', 'Value / Invoices', 'Covered items / services', 'Suppliers', 'Comments', and 'Transactions'. Below the menu bar are several sections for data entry:

- Contract code:** Fields for 'Code', 'Description', and 'Status' (set to 'Active'). Buttons for 'New entry', 'Delete', 'Save', and 'Cancel' are on the right.
- Contract dates:** Fields for 'Creation date' (pre-filled with 'Fri 03/05/2014'), 'Start date', and 'End date'.
- Covered items of contract:** Fields for 'Category', 'Contract type', 'Coverage type', 'Activity', and 'Person in charge'. A 'Warning message' field is also present.
- Minutes and Tickets:** Fields for 'Minutes' and 'Tickets', each with a 'Balance' label below it.

At the bottom left, there are navigation arrows and a 'Refresh' button.

ATLANTIS / xLINE Loyalty Card System

The loyalty card system which is incorporated into Atlantis and xLine application enables the user to collect and redeem loyalty points through the Retail and Wholesale modules.

It has been designed for manageable definition of parameters tailor-made to every company's special requirements. Moreover, it offers direct information per customer regarding the earned redeemed loyalty points.

Basic Features:

- Monitoring of main and secondary cards which can be linked with a Master card. Thus, the collection of points is performed separately so as not to lose statistical information, while the points redemption includes the total of points of all cards.
- The way of collecting and redeeming the loyalty points is user-defined by using up to two dimensions of items and cards' data. For example, by card, item category, item group etc.
- The number of collected loyalty points can be related with the sales quantity, the line value, the total value of the document or even a defined algorithm.
- During the sales procedure, the data and the balance of loyalty points are displayed in order to proceed to points' redemption.
- The redemption of loyalty points could be a gift, a discount, a special price or a combination of all.

New e-shop sites

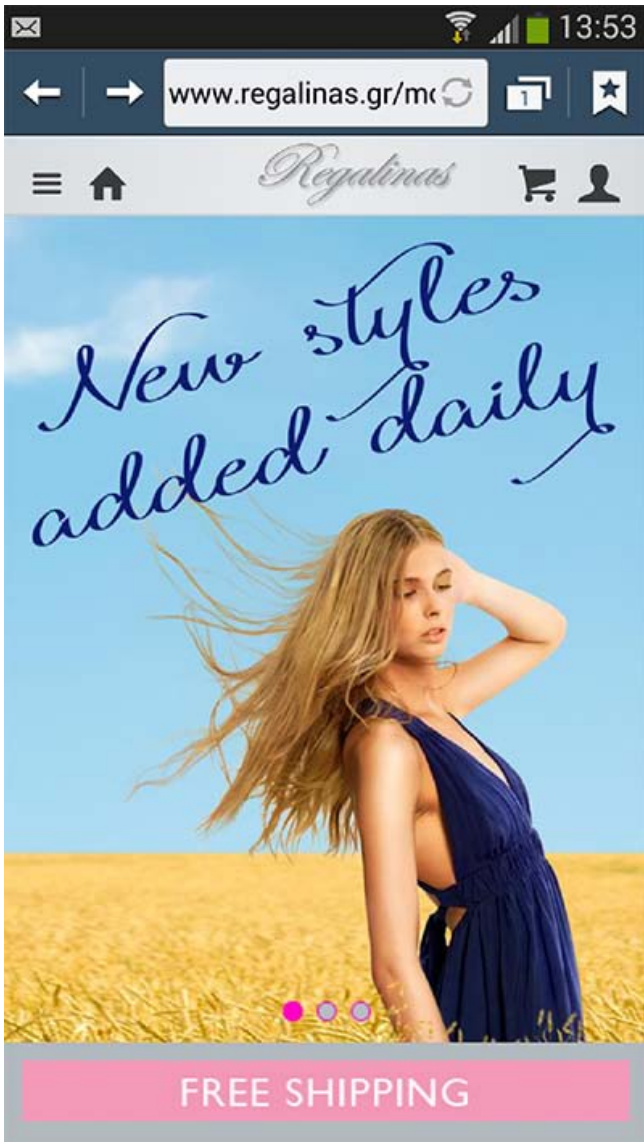

REGALINAS Mobile WOMENSWEAR

Application: **e-Shop B2C, B2B, Mobile, Corporate**
Content Management System: **xLine CMS**
URL: <http://www.regalinas.gr/mobile/>

Regalinas is a **Greek women's fashion brand** founded in 1985 and is active in the area of design, production and trade of women's clothing.

A **Mobile e-shop Site** has been developed by **Altec Software** for **Regalinas** following the overwhelming success of **Regalinas e-Shop Site**.

It has been designed from scratch to fully exploit the Smartphones and Tablets' features thus enabling Regalinas customers to make fast and easy purchases from their devices no matter where they are.

It works on:

- **any browser**,
- **any operating system** (Apple iOS, Google Android, Microsoft Windows Phone, Blackberry OS),
- **any** Smartphone or Tablet device incorporating the aforementioned operating systems and does not require any extra maintenance.

The device (Smartphones or Tablets) is automatically detected by the application which displays dynamically pull-down menus for optimum website and product's navigation.

Large images display the products placing emphasis on every detail.

Easy-to-use pop-up windows assist the user to select the preferred color and size.

In no time, the basket is converted to an order and the order is completed through banks and Paypal's safe environment.
