

Touch Screen Retail

The Touch Screen Retail application constitutes an up-to-date system of retail sales management with the use of touch screen. Its advanced operations result from Altec Software's long experience in designing and developing user-friendly information systems. The direct communication with the commercial module contributes to the improvement of services' quality.

Main features:

- Large and distinct keys
- Parametric-defined categories of items
- Assortment of items on screen
- Items ribbon including quantity, price and discount
- Multiple ways of searching items (select from touch screen, barcode, virtual keyboard)
- Capability to modify quantity, price and discount both before selecting the item and during the sales procedure.
- Items management by Color / Size
- Items management by Serial Number
- Multiple payment ways (cash, credit cards etc)
- Issue of all types of sales documents

Business advantages

- Ergonomic and easy sales procedure, faster customer service.
- The data are transformed into reliable information to produce analysis references.
